

ACTA STEREOLOGICA

CONTENTS	Page
<i>FOREWORD</i>	
Presidential address, B. Pakkenberg	1
<i>MATHEMATICAL FOUNDATIONS OF STEREOLOGY</i>	
Anisotropic stereology of fibres and surfaces, V. Beneš, J. Chadoeuf, J. Ohser	3
Unfolding the bivariate size-orientation distribution, V. Beneš, M. Gokhale, M. Slámová	9
Classification procedures for diagnosis based on multiple morphometric parameters, A.J. Einstein, J. Gil	15
A geometric probability approach to estimating particle volume distribution, S.L. Gay	25
Random structures generation by lattice gas, D. Jeulin	31
Unbiased estimation of the specific Euler-Poincare characteristic, P. Jouannot, J.P. Jernot, C. Lantuejoul	45
Estimating mean linear Intercept length using the trisector, L.M. Karlsson, A.M. Gokhale	53
Orientation analysis in second-order stereology, P. Krejčíř, V. Beneš	59
Isoperimetric inequalities and shape parameters, M.J. Labouré, M. Jourlin, I. Fillère, J.M. Becker, F. Frénée	65
A stereological algorithm to generate uniform points over a domain in a high dimensional space, C. Lantuejoul	71
Estimation of oriented normal direction distribution via mixed areas, J. Rataj	77
A further method to measure fractal dimension and the maximum property, K. Sandau	83
Spherical contact and nearest neighbour distances in Boolean cluster fields, I. Saxl, J. Rataj	91
On random packings by no-spherical particles, M. Tanemura	97
<i>FORTHCOMING MEETINGS</i>	III
<i>NEW BOOKS</i>	IV
<i>INSTRUCTIONS TO AUTHORS</i>
